

**PACIFIC CHRISTIAN SCHOOL**

Educational Excellence to the Glory of God

## PCS Cloud Computing

Pacific Christian School provides students in grades K – 12 with a variety of online services, which are managed by the school, to help support student learning.

Many of these educational services host and store data on their servers which are located both inside and outside of Canada. While stored outside of Canada, information in your child's online school accounts may be subject to the laws of foreign jurisdictions, including the United States.

The primary online tool that PCS currently uses is **Google Apps for Education (GAFE)**. GAFE is a powerful set of secure online collaboration tools for teachers and students that also provides essentially unlimited storage for school-related work.

These tools are accessible from both the Chromebooks and desktop computers at PCS as well from essentially anywhere with an Internet-enabled device.

*PCS acknowledges these policies have drawn from publicly available policies on these topics from various public and independent school authorities.*
